### PROFILE

Almost 9 years of experience in developing and engineering various complex software solutions in different working environments. Building solutions for social networks, government's software, for health care and private sector. I've been participating in most of the projects in the early days as software developer and the last 5 years as Senior Software Engineer and Team Leader working on high scalable software solutions on top of the newest technologies like Elasticsearch, WebRTC, SignalR, NodeJS, Turn/Stun servers. My working time was mainly spent on developing applications and services in C# on Microsoft .NET framework, database solutions on SQL Server and Redis, hosting services on Microsoft Azure Cloud and Real-time communication software on SignalR and WebRTC. I have done some mobile development on Android and IOS platform mainly expanding our client software for real-time communication (chat, video and audio conference calls).
